B horizontal
FEM
$H^2/(2\varepsilon D_\parallel)$ (ec. 34)
observado ~100 Myr
$\langle t \rangle$ (Myr)
$\varepsilon = D_\perp/D_\parallel$
Todas las corridas contra D_n
B horizontal
B inclinado, ε = 0.01, tan a = 0.1 y 0.3
$H^2/(2D_n)$
$\langle t \rangle$ (Myr)
$D_n/D_\parallel$ (ec. 33)
